
Product Validation and Next Steps

A Review of Recent Progress and Future Roadmap

Strategic Focus Over the Past Two Weeks

40%

System Testing & Validation

30%

Stakeholder Feedback

20%

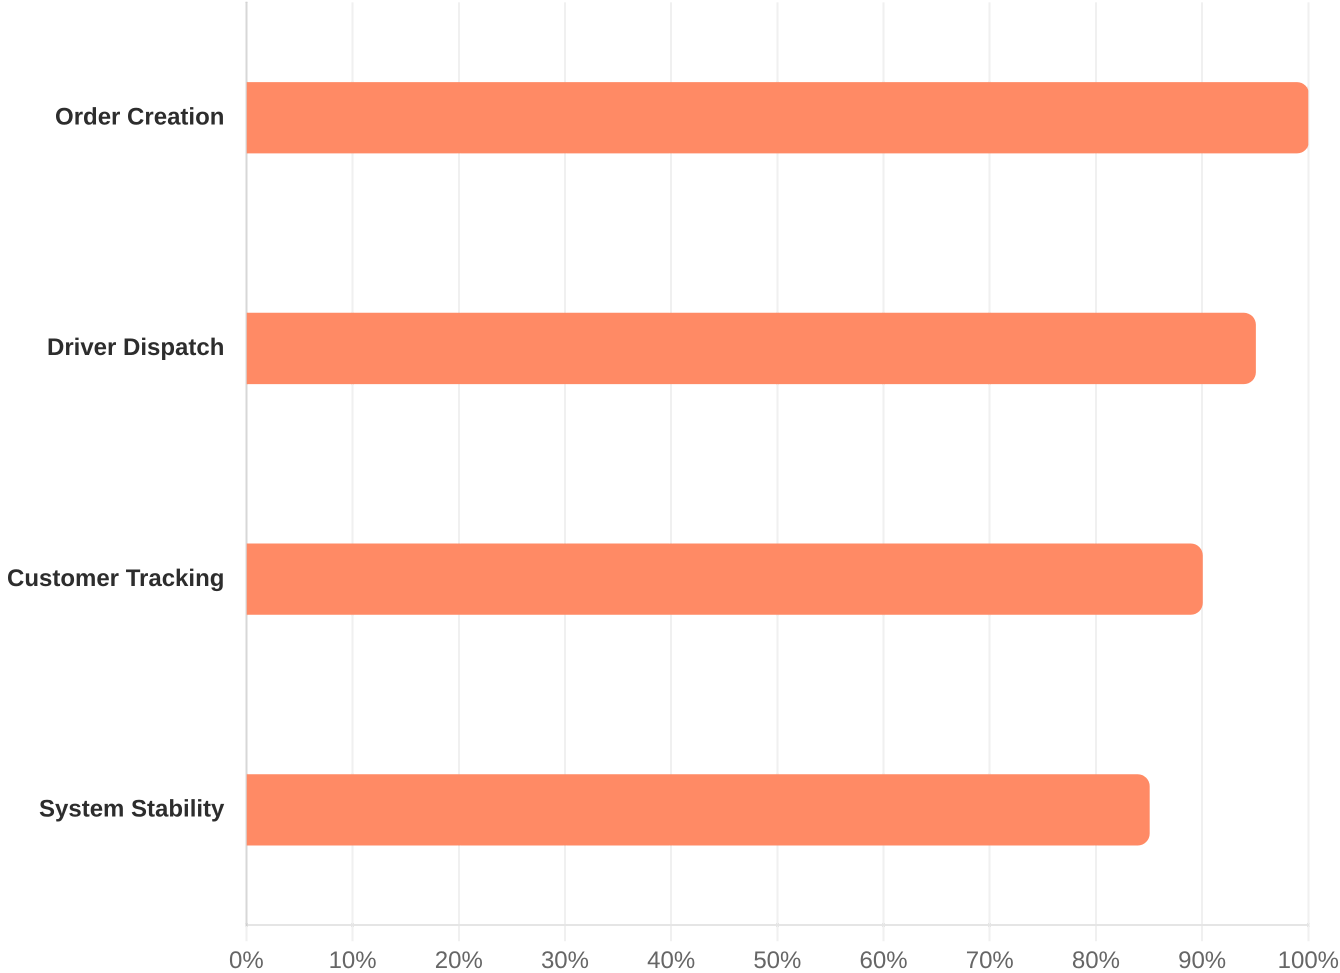

Experience Refinement

10%

Strategic Planning

Our primary focus has been on ensuring system reliability through real-world testing and aligning our roadmap with business owner needs.

Understanding the System in Practice

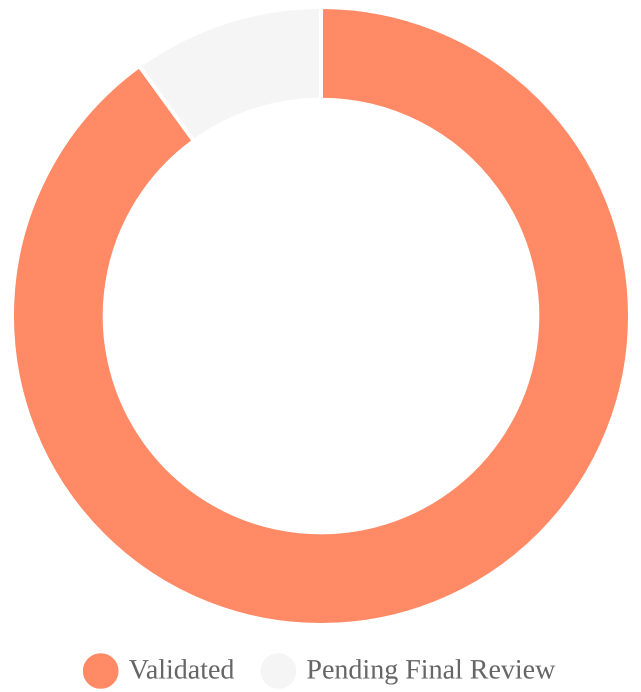

Real-World Testing

We conducted extensive simulations of actual delivery scenarios to observe system behavior under real use conditions.

End-to-End Validation

Every stage of the delivery lifecycle was tested, from initial order creation to final delivery confirmation and tracking.

End-to-End Process Validation

Order Creation

100% Success

Simulated business user input verified for ease of use and data integrity across all test scenarios.

Driver Dispatch

95% Success

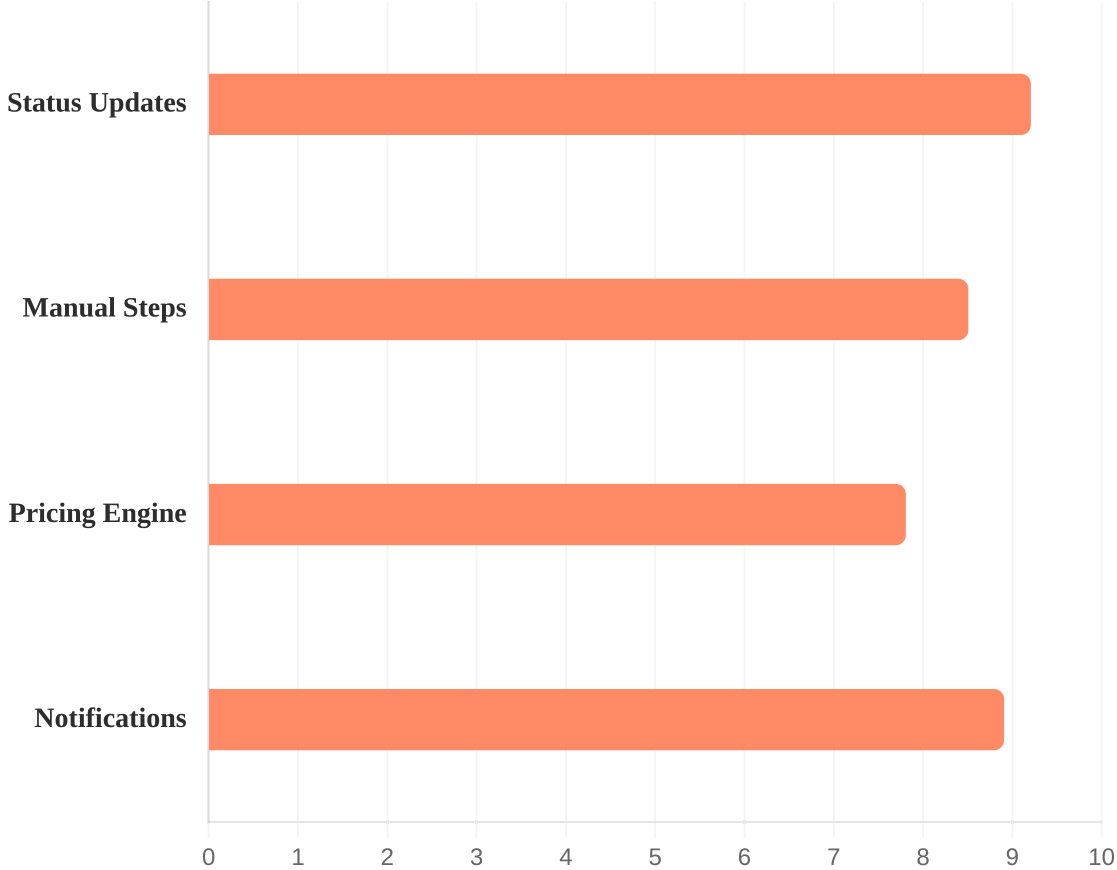

Real-time job assignment confirmed with seamless acceptance and navigation for active drivers.

Customer Tracking

90% Success

Live status updates validated for accuracy of real-time location data and customer notifications.

Conversations with Business Owners

- **Direct Platform Engagement**
Shared the platform with several business owners to observe their interaction and gather candid feedback on the user interface.
- **Operational Pain Points**
Identified critical friction points in the current workflow, specifically around manual data entry and notification delays.
- **User-Centric Priorities**
Feedback has directly influenced our development roadmap, prioritizing automation and transparency for business users.

Key Feedback and Proposed Enhancements

Direct insights from business owners and our strategic response

Feedback Area	Business Owner Insight	Proposed Solution
Status Updates	"We need to know exactly where the driver is at every stage without having to call them."	Granular Notifications: Implement automated, real-time status triggers for every milestone.
Order Creation	"The current process takes too long. We need to be able to fire off an order in seconds."	UI Streamlining: Redesign the order entry form to reduce manual input fields by 40%.
Pricing	"Estimating manually is prone to error. We want the system to tell us the cost upfront."	Automated Engine: Develop a dynamic pricing algorithm based on distance and vehicle type.
Notifications	"Drivers sometimes miss jobs because the alerts aren't loud or persistent enough."	Enhanced Alerts: Upgrade driver app notifications with persistent sound and vibration patterns.

Driving Efficiency Through Automation

Feature Categories:

- High Priority
- Medium Priority
- Future Roadmap

Key Insights

- Automated pricing identified as the highest impact feature for business owners
- Smart notifications critical for reducing missed jobs and driver friction
- Streamlining order creation significantly reduces manual overhead

Refining the Customer Touchpoints

High Impact

Medium Impact

Operational

Attention to Detail

Focusing on the micro-interactions that define the user experience, ensuring every button, label, and transition feels intentional and helpful.

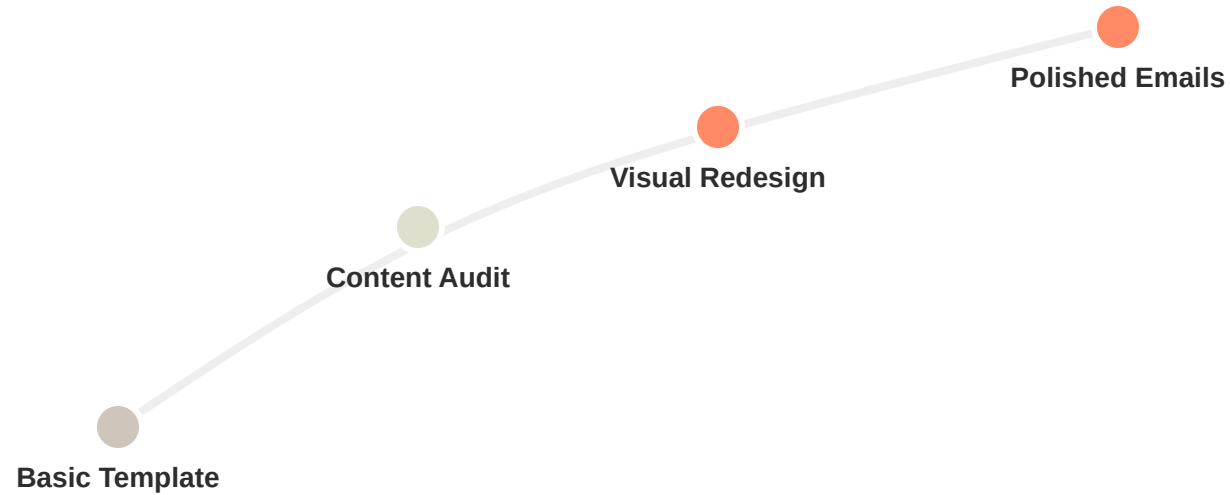

Professionalism

Moving beyond basic templates to a bespoke design language that reflects the reliability and quality of our delivery service.

Trust Building

Consistent branding and clear communication across all channels to foster long-term confidence in the platform.

Professional Email Communications

Audit

Reviewed all existing system-generated templates for clarity and tone.

Design

Applied a clean, modern aesthetic with consistent branding.

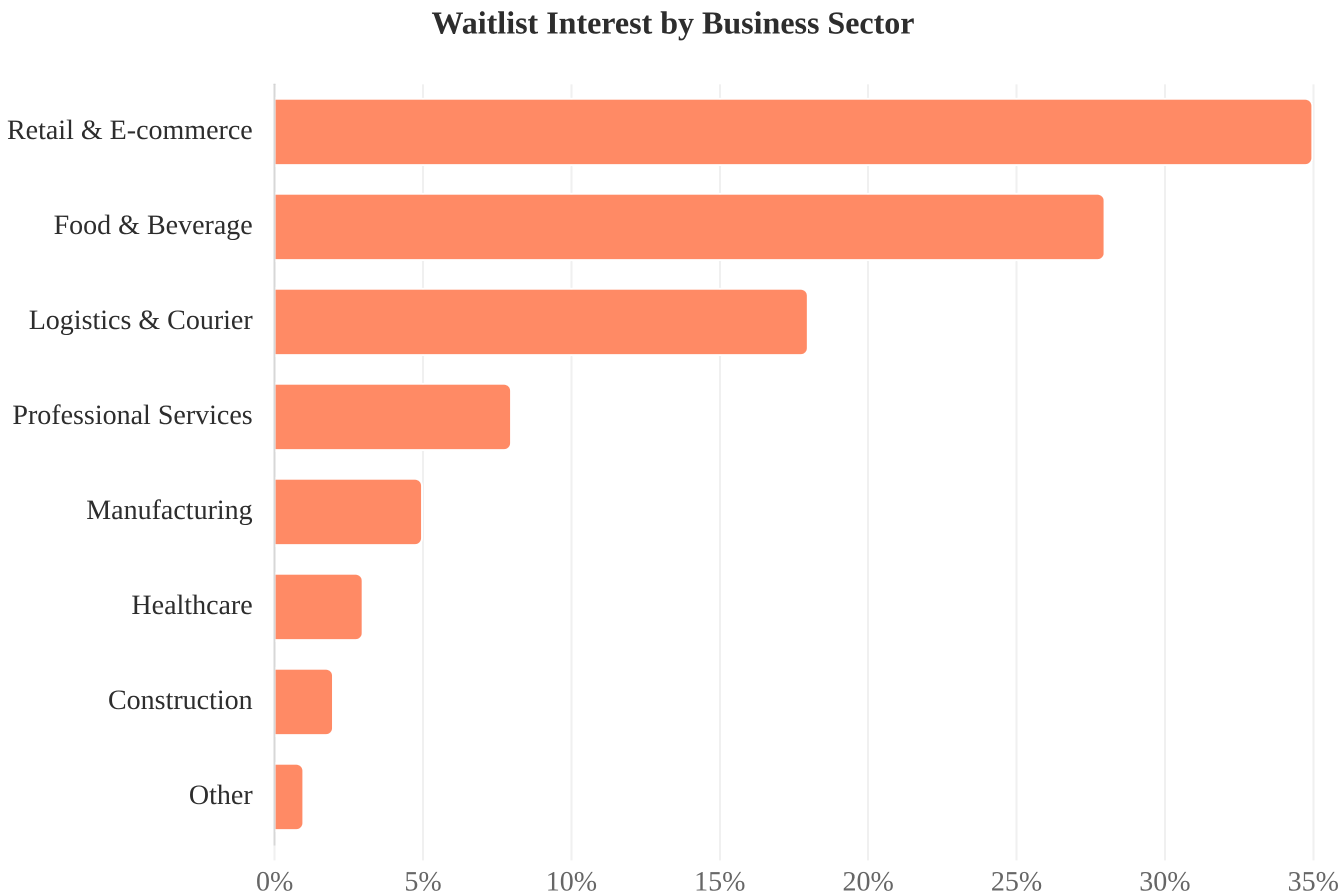

Integration

Implemented responsive HTML templates into the delivery system.

Impact on Perception

- Cleaner designs improve information hierarchy and readability
- Professional touchpoints build immediate trust with new customers
- Consistent branding reinforces platform reliability

Preparing for the Early Access Phase

Source: Early Access Waitlist Analytics, March 2026

15

Target businesses for the initial early access cohort

14 Days

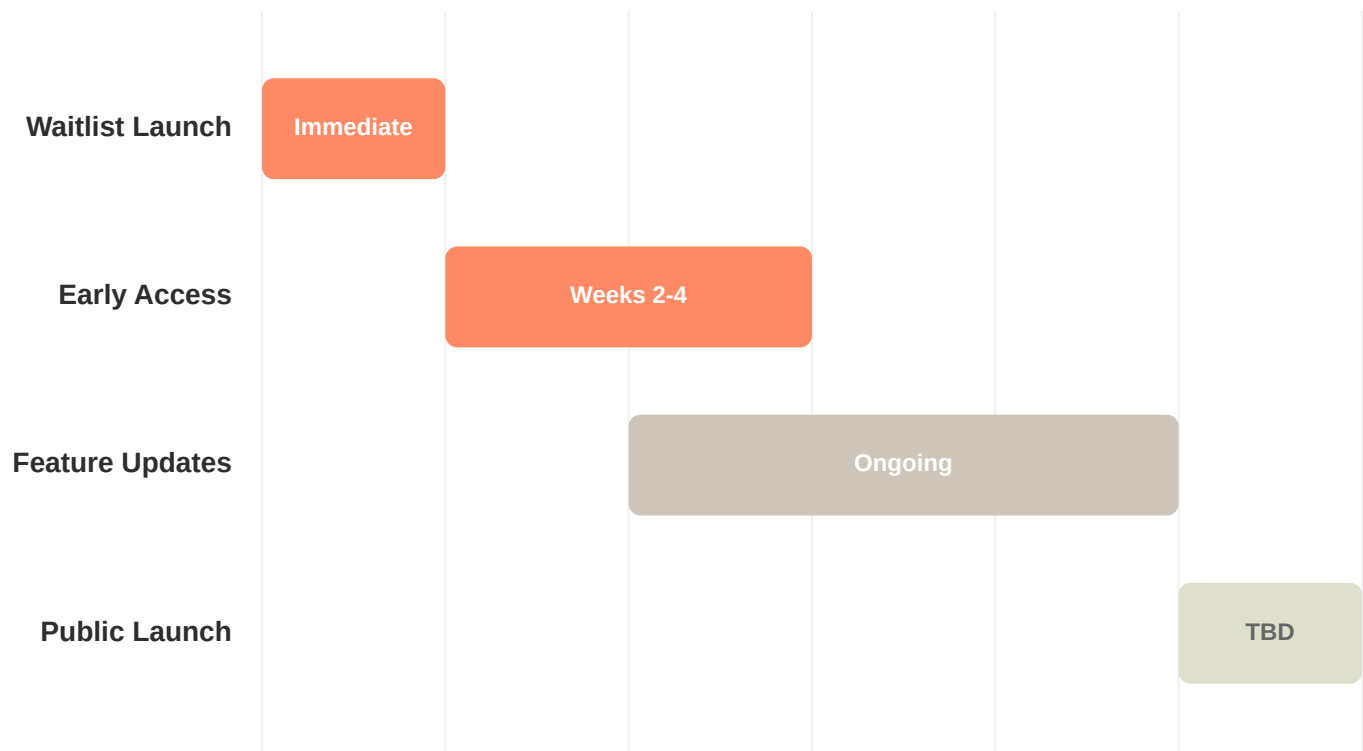

Target onboarding time from waitlist to active use

Onboarding Strategy

- Controlled rollout to ensure high-quality support and system stability
- Direct feedback loops with early users to guide rapid iterations
- Phased expansion based on cohort performance and system load
- Priority access for businesses with high-volume delivery needs

Our goal is to create a stable, high-performance environment for our first users, ensuring that the platform scales reliably as we move toward a full public launch.

Upcoming Milestones and Strategic Goals

Waitlist Launch

Opening sign-ups for interested businesses immediately.

Early Access

Onboarding the first cohort of business users in 2-4 weeks.

Feature Updates

Implementing automated pricing and enhanced alerts.

Strategic Goals

- Controlled onboarding to ensure high-quality support.
- Iterative refinement based on real-world early access feedback.
- Scaling the user base as system reliability is proven.
